
Cassandra ORM

Release 0.0.1

Sep 27, 2020

Contents

1	Install	3
2	Usage	5

Cassandra ORM which uses Python annotations similar to the `typing.NamedTuple` API

CHAPTER 1

Install

```
$ pip install -U corm
```

CHAPTER 2

Usage

```
import corm

from corm.models import CORMBase

from datetime import datetime

class TestModel(CORMBase):
    __keyspace__ = 'mykeyspace'
    column_one: str
    column_two: int
    column_three: datetime

corm.register_table(TestModel)
corm.sync_schema()

first_test = TestModel('one', 'two', datetime.utcnow())
second_test = TestModel('first', 'second', datetime.utcnow())
corm.insert([first_test, second_test])
```
